Wash sand the simplest and most efficient way

Use Coarse Material Washers and Log Washers, with confidence in the selection and operations

Very few people, including manufacturers or their local representatives have made any effort to train the industry in the correct use of fine and coarse material washers.

While there is a vast array of companies willing to sell you a Screw Washer, hardly any have the knowledge or expertise to tell you how to set them up or run a unit efficiently. Few are able to troubleshoot when there is a problem, a change of feed, or you want to make new products.

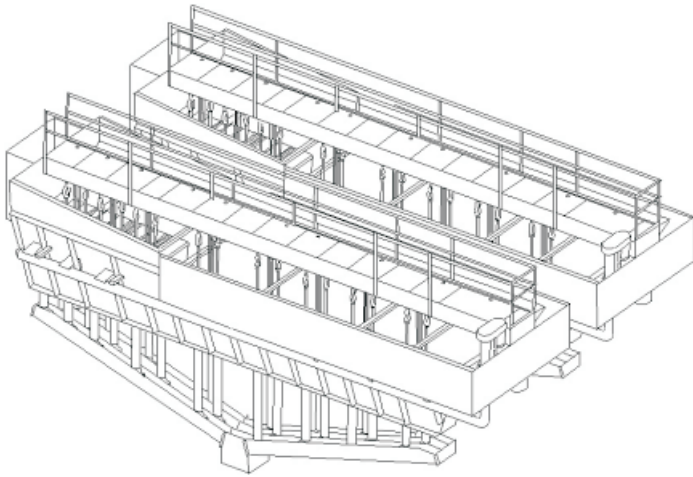

Produce clean stockpiles, up to 80% solids

The expertise at Rivergum comes from close to twenty years experience with this type of equipment, as well as drawing on expertise from overseas on the sizing and performance of fine material, coarse material, and log washers. We can offer advice on running current equipment, no matter who manufactured it, nor how old it is. We size equipment to meet specific applications, with a view to flexibility in products and production throughput. Operational requirements change over time, that is a given. We know you may want to make something completely different, with the same equipment, in the future, or just increase throughput.

Working with a variety of engineers and manufacturers, we are able to supply a complete range of equipment, associated components, parts, service, technical advice, and ongoing backup.

Washing sand is the easy part, utilising equipment in the most efficient way can be challenging, especially when there is a lack of back up knowledge that is readily accessible.

Classification of sand is reasonably simple, as well, once the equipment in use and the performance of the feed is understood. When excesses of certain particle sizes are present in the deposit, a Classifying Tank is the most efficient way to separate and reblend the feed, in addition to washing it.

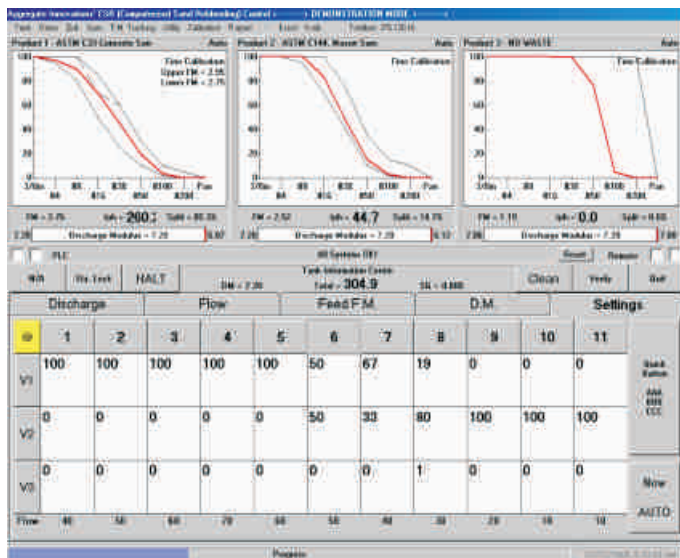

Classifying Tanks - the simplest way to truly "Classify" and reblend

Consistent Stockpiles in grade

Rivergum Industries has been providing sound advice and sound equipment to the Australian market for a long time. The equipment sold, advice offered and adjustments recommended, have all worked as we predicted.

In a complicated society, you are trying to achieve a fairly simple outcome. Shouldn't you be turning to people who simplify processes and ensure they run as efficiently as possible?

Controls from the most basic, to computerised state of the art
